Dairy-Herd-Improvement Letter

ARS-44-61
(Vol. 35, No. 9)

September 1959

RATE OF IMPROVING DAIRY HERDS INCREASING

DHIA members are accelerating the rate of improving their dairy herds. This fact is revealed by a reference to the yearly production level of all cows and DHIA cows during the past three decades. All the dairy herds of the nation are being improved at an accelerated rate, but at a lower rate and at a lower level of production than for DHIA herds. This is shown in the following table:

Comparison of rates of improvement of all dairy herds and DHIA herds by 10-year periods

10-year period	All Cows		DHIA Cows	
	Level of production at end of period	Yearly rate of improve- ment for period	Level of production at end of period	Yearly rate of improve- ment for period
	(Pounds)	(Pounds)	(Pounds)	(Pounds)
1929-38 (inclusive)	4,448	4	7,831	46
1939-48 (inclusive)	5,010	45	8,675	84
1949-58 (inclusive)	6,330	132	10,068	140

Continued improvement of high-producing herds requires much more planning, careful feeding and management than it does for low-producing herds. By using their DHIA records to guide them in culling, feeding, breeding and management practices, DHIA members are continuing to improve their high-producing herds at an accelerated rate.

1958 Summary of DHIA Herd Data

A summary of 27,525 complete individual herd reports (780's) for the testing year 1957-58 revealed that on the average DHIA cows consumed during the year 6,500 pounds of succulent roughage, 4,200 pounds of dry roughage, 3,000 pounds of concentrates and were on pasture 168 days.

On the following page is a tabulation showing by State, the average production and feed consumed per cow, based on complete herd reports (780's) received for the DHIA testing year 1957-58.

SUMMARY OF THE 1957-58 DAIRY-HERD-IMPROVEMENT ASSOCIATION RECORDS, BY STATES ^{1/}

1/ Based on complete individual herd records, as reported by association supervisors.

2/ Complete feed data not reported.

DHIA PROVED-SIRE RECORDS TABULATED IN AUGUST 1959

Following is a list of 402 sires whose records were tabulated or retabulated by the Animal Husbandry Research Division in August 1959. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
